

AI
CONF.

total number of carbohydrate chains multiplied by the average proportion of tetraantennary carbohydrate structures of at least 2400 or

- (b) in the case of EPO from human cells, said EPO molecules have a value for the product of the average proportion of N-acetyl-lactosamine repeats relative to the total number of carbohydrate chains multiplied by the average proportion of tetraantennary carbohydrate structures of at least 800.

87. The process of claim 82, 83, 84, 85 or 86 wherein the enrichment is achieved by the process of claim 64, 65 or 66.

REMARKS

Entry of the foregoing amendment is requested.

Respectfully submitted,

FULBRIGHT & JAWORSKI, LLP
